

"Powering the Future"

Dear Commodity Club Members & Experts,

We are delighted to invite you to our next event, in collaboration with and with the support of **WisdomTree**:

"Powering the Future.

Navigating the Critical Metals Conundrum in the Energy Transition"

27th June in Zurich, Baur au Lac Zurich, from 16:00 to 21:00

During this event **we will examine the role of critical metals in the "energy transition"**, which is the process of moving away from burning hydrocarbons that are responsible for climate change to lower green-house gas producing energy technologies.

Metals are essential in wind, solar, battery and many other clean energy technologies. **There is however an environmental impact from producing the raw materials used in clean energy. For the energy transition to be successful these impacts need to be carefully navigated.**

Resource depletion, recycling, mining investment are all hot topics in the energy transition. Despite the challenges in meeting raw material needs of the transition, the alternative – sticking with status quo of hydrocarbon dependency – is incompatible with meeting climate goals.

During this session **we will have speakers provide their perspectives on the challenge and discuss their views on the solutions available in the market.**

This will be followed by a **panel discussion** and **social networking drinks**.

Check out the [full agenda](#) and the [speakers](#).

Places are limited to 50 people. Registration is binding, so make sure you secure your place by clicking on the button below.
